

FOREST BIODIVERSITY AND THE FUTURE?

Donald L. Dahlsten

College of Natural Resources, University of California, Berkeley, CA 94720-3112, USA

The presentations contributed to this symposium will be summarized and synthesized into a final statement. The topic of insect communities and the forest landscape will be considered in the context of exotic species, including pathogens, and their impacts on forest biodiversity. Also, immediate and long-term concerns about forest biodiversity will be addressed.
